

SEBASTIAN B. PAMBUAN

Malabon City, Metro Manila | 0970 891 2923 | sebastianpambuan@gmail.com

PROFESSIONAL SUMMARY

Recent Information Technology graduate with hands-on experience in full stack web development through a four-month MIS internship. Experienced in developing, customizing, testing, and maintaining web-based business applications using PHP, JavaScript, HTML, CSS, MySQL, and CodeIgniter 3. Skilled in database management, system debugging, troubleshooting, and implementing software solutions to support business requirements. Familiar with C/C++ development through academic system projects and hardware-software integration.

WORK EXPERIENCE

Full-Stack Developer Intern (MIS Department) | Transfer It

February 2026 – May 2026

- Developed and customized ERP system modules using PHP, CodeIgniter 3, JavaScript, HTML, CSS, and MySQL, implementing requested features and system changes to support business operations.
 - Modified and optimized database structures, SQL queries, reports, user interfaces, and back-end functions, improving system functionality and aligning applications with business requirements.
 - Tested, debugged, deployed, and maintained web-based applications through cPanel, resolving system issues and ensuring reliable delivery of requested enhancements.
 - Collaborated with team members and end users to understand requirements, implement requested system changes, and document updates to support ongoing system maintenance and development.
-

EDUCATION

BACHELOR OF SCIENCE IN INFORMATION TECHNOLOGY | 2022 – 2026

City of Malabon University | Longos, Malabon City

- Dean's Lister
-

TECHNICAL SKILLS

- **Programming:** PHP, JavaScript, Python, Java, C/C++, HTML, CSS
 - **Frameworks & Runtime:** CodeIgniter 3, Node.js
 - **Databases:** MySQL, SQL, MongoDB
 - **Tools & Platforms:** VS Code, cPanel
 - **Development:** CRUD Operations, Debugging, Testing, Troubleshooting
 - **Professional:** Problem Solving, Attention to Detail, Communication, Teamwork, Adaptability
-

PROJECTS

System Developer | Capstone Project: Smart Bottle Disposal and Charging Reward System

August 2025 – November 2025

- Developed core system logic using C/C++ to control bottle detection, disposal mechanisms, and reward processing, enabling the automated operation of the system.
- Integrated and programmed hardware and software components to connect bottle recognition, system controls, and user reward tracking, supporting the complete system workflow.
- Debugged, tested, and troubleshoot hardware and software components throughout development and integration, achieving approximately 90% operational accuracy.
- Collaborated with team members during system design, development, integration, and testing, contributing to the implementation and refinement of system functions.
